

FREE OWNER SCORECARD

The Pest Control Revenue Leak Playbook

27 checks to find lost cash, wasted route capacity, incomplete field work, stalled estimates, and preventable churn before you buy another lead.

27	6	7
operating checks	leak categories	days to first fix

This is not a generic business quiz. Every check asks for visible proof: a queue, field, owner, date, record, or decision your team can verify.

pestflow.org/playbook

How to use the scorecard

Score each check from 0 to 2. Do not award points because the team usually remembers. Award points only when the workflow leaves evidence another person can find.

0 - Not controlled	The result depends on memory, scattered messages, or heroics.
1 - Inconsistent	A process exists, but it is skipped, incomplete, or hard to verify.
2 - Controlled	The process creates visible evidence, an owner, and a clear next action.

Your score

0-21	22-39	40-54
High leakage Fix ownership and evidence first.	Unstable growth Standardize the weakest handoffs.	Controlled system Improve speed, capacity, and exceptions.

Write your starting score: _____ / 54

Then circle the three zeroes closest to money or customer trust. Those become the 7-day fix plan at the end of this playbook.

1. Recurring revenue

Find the leaks that happen after the customer already said yes.

1. Card-on-file coverage Can you see the percentage of active recurring customers with a valid payment method? Proof: A current list, an owner, and a weekly follow-up queue.	<table><tr><td>0</td><td>1</td><td>2</td></tr><tr><td>Not controlled</td><td>Inconsistent</td><td>Controlled</td></tr></table>	0	1	2	Not controlled	Inconsistent	Controlled
0	1	2					
Not controlled	Inconsistent	Controlled					
2. Service-to-invoice handoff Does every completed service create the correct invoice without someone rebuilding it? Proof: A completed job, invoice, and payment state that reconcile.	<table><tr><td>0</td><td>1</td><td>2</td></tr><tr><td>Not controlled</td><td>Inconsistent</td><td>Controlled</td></tr></table>	0	1	2	Not controlled	Inconsistent	Controlled
0	1	2					
Not controlled	Inconsistent	Controlled					
3. Failed-payment recovery Does a failed payment create an owned next action instead of sitting in a report? Proof: Retry timing, customer message, owner, and escalation date.	<table><tr><td>0</td><td>1</td><td>2</td></tr><tr><td>Not controlled</td><td>Inconsistent</td><td>Controlled</td></tr></table>	0	1	2	Not controlled	Inconsistent	Controlled
0	1	2					
Not controlled	Inconsistent	Controlled					
4. Skipped-service recovery When a recurring visit is skipped or rescheduled, is the revenue still protected? Proof: A visible exception queue with a replacement date.	<table><tr><td>0</td><td>1</td><td>2</td></tr><tr><td>Not controlled</td><td>Inconsistent</td><td>Controlled</td></tr></table>	0	1	2	Not controlled	Inconsistent	Controlled
0	1	2					
Not controlled	Inconsistent	Controlled					
5. Agreement and price control Can the office verify the service promise, frequency, and current price before changing anything? Proof: Searchable agreement history and an approval trail.	<table><tr><td>0</td><td>1</td><td>2</td></tr><tr><td>Not controlled</td><td>Inconsistent</td><td>Controlled</td></tr></table>	0	1	2	Not controlled	Inconsistent	Controlled
0	1	2					
Not controlled	Inconsistent	Controlled					

Section score: _____ / 10

2. Route capacity

Protect the minutes between stops, not just the minutes on the calendar.

6. Stops per route day Do you know completed stops per technician by day and service type? Proof: A weekly trend that separates capacity from unusually short work.	0 Not controlled	1 Inconsistent	2 Controlled
7. Windshield time Can you see how many paid hours disappear into travel? Proof: Drive minutes beside route revenue and completed stops.	0 Not controlled	1 Inconsistent	2 Controlled
8. Route holes Does a cancellation create a recoverable opening the office can fill? Proof: A live opening with location, duration, and eligible customers.	0 Not controlled	1 Inconsistent	2 Controlled
9. Real job duration Are route decisions based on actual service duration or the same default block for every job? Proof: Duration history by pest, service, property, and technician.	0 Not controlled	1 Inconsistent	2 Controlled
10. Arrival-window risk Can dispatch spot a late or impossible stop before the customer calls? Proof: A visible risk signal and a proactive communication step.	0 Not controlled	1 Inconsistent	2 Controlled

Section score: _____ / 10

3. Technician closeout

The driveway is the cheapest place to prevent tomorrow's office cleanup.

11. Treatment record

Can the record answer what was used, where, how much, and for which target pest?

Proof: Required fields that match the service performed.

0	1	2
Not controlled	Inconsistent	Controlled

12. Photos and findings

Are photos and observations attached to the customer and job instead of a technician's camera roll?

Proof: Time-stamped evidence with useful captions.

0	1	2
Not controlled	Inconsistent	Controlled

13. Customer recap

Does the customer receive a plain-language summary of findings, treatment, preparation, and next steps?

Proof: A readable recap sent before the tech leaves.

0	1	2
Not controlled	Inconsistent	Controlled

14. Product usage

Can product usage be reconciled to the truck and service record?

Proof: Product, quantity, location, technician, and job.

0	1	2
Not controlled	Inconsistent	Controlled

15. Completion gate

Can a technician mark a job complete while required information is still missing?

Proof: A conditional checklist that blocks incomplete closeout.

0	1	2
Not controlled	Inconsistent	Controlled

Section score: _____ / 10

4. Estimate follow-up

A quote is not a sales process until the next action has an owner.

16. Response speed Can you measure how long it takes to contact a qualified lead? Proof: Created time, first response, and outcome.	0 Not controlled	1 Inconsistent	2 Controlled
17. Next-action ownership Does every open estimate have an owner and a dated next step? Proof: No open quote without an owner and follow-up date.	0 Not controlled	1 Inconsistent	2 Controlled
18. Useful sequence Does each follow-up remove a different objection or uncertainty? Proof: Recommendation, proof, common objection, and easy booking step.	0 Not controlled	1 Inconsistent	2 Controlled
19. Lost-reason learning Do you know why estimates are won, lost, or stalled? Proof: A small reason list the team can actually use.	0 Not controlled	1 Inconsistent	2 Controlled

Section score: _____ / 8

5. Retention and communication

Callbacks and customer questions are operating signals, not random interruptions.

20. Re-service ownership

Does every callback have an owner, next action, and promised customer update?

Proof: Issue, prior service, owner, deadline, and resolution.

0	1	2
Not controlled	Inconsistent	Controlled

21. Cancellation save ladder

Does the office know what to check before refunding or cancelling?

Proof: Expectation, service history, re-service option, manager review.

0	1	2
Not controlled	Inconsistent	Controlled

22. Proactive arrival updates

Is the customer told when timing changes before they need to chase the office?

Proof: A clear window, delay notice, and reply path.

0	1	2
Not controlled	Inconsistent	Controlled

23. Reason-coded callbacks

Can you group callbacks by cause instead of searching free-text notes?

Proof: Reason tags by pest, service, technician, and expectation gap.

0	1	2
Not controlled	Inconsistent	Controlled

Section score: _____ / 8

6. Owner visibility

A dashboard earns its place by changing Monday's decision.

</

Section score: _____ / 8

Your 7-day leak-fix plan

Choose three zero-score checks. Fix the smallest complete workflow first - not the biggest software project.

Priority	Visible evidence to create	Owner	Due
1			
2			
3			

Day 1	Define the evidence and owner.
Days 2-3	Run the workflow on one route, technician, or customer segment.
Days 4-5	Review exceptions. Remove fields or steps that do not improve the decision.
Days 6-7	Make the workflow visible to the whole team and assign the weekly review.

Want these checks connected to customers, routes, technicians,
billing, communication, and owner reporting?
